

## Froet Black Box

### The Froet Black Box for Advanced Green Roof, Drain Protection and Access

- Considerable Labor Savings
- HDPE Construction
- Easy Height Adjustment On The Jobsite From Any Height Down To 6"
- Corrosion—Resistant Hardware
- Lower Cost Than S/S Boxes
- Optional 2000 LBS Fiberglass Load Lid
- Excellent Resistance to Fertilizers
- Provides Superior Drainage with Green Roof Utilizing Drainage Mats
- Simplifies Green Roof Drainage Design
- Quality Construction for Decades of Service

Green Roofs are serious business, their cost makes them so. They need to be installed correctly, and if a Green Roof does not drain properly it will lead to premature failure of the water-proofing membrane. The problem is no one knows if it is not draining properly until it is too late. If you thought the Green Roof was expensive when it was put on wait until it is removed and reinstalled. Enclosing a drain in perforated stainless steel will prevent the drain from operating properly, and very quickly due to the S/S plugging with Green Roof debris. **The Drainage mat must flow directly to the drain** and the drain enclosure must be a secondary drainage path to maintain proper drainage of the Green Roof. Don't be responsible for specifying a Green Roof enclosure that will cause premature failure of the water-proofing membrane.
