

## Introducing the 8" Froet Drain® Roof Drain

Well this is MONGO the worlds largest 8" drain. It is so big it barely fit on this flyer Some of you may ask why, well it is because unbeknown to many in the industry there has been a problem with the larger size drains. Specifically they are not large enough to handle the required flow. With Froet personnel having over 25 years experience in the roofing industry this issue had presented itself many times thru the years. So we were concerned with this when we designed MONGO and wanted to be sure it would handle the required flow. Well with the industry flow testing now and with our 3rd party flow testing of MONGO it appears our concerns were spot on! When a roof drain is required to handle large GPM's the water becomes very dynamic and all factors of the roof drain begin to have an affect on the flow it can handle. One design factor wrong can seriously reduce flow at these high GPM's. You must know what your large capacity roof drain can handle because if you don't the result could be catastrophic. Froet is at the forefront of roof drain flow and durability and even offers a 25 year warranty. There are not too many others that can say that! Take a look at our website and view our 8" flow report so you will know how MONGO will preform for your project.
