

Introducing the Froet Primary Drain

The Froet 200C primary roof drains are built to the same standard-exceeding requirements as our 100C bi-functional drains are. Our drains flow better, are more durable and have a 25 year warranty available to protect the building owner from the high cost of replacing the roof drain at the first reroof. Our primary drain is designed to integrate into any roofing system or design. All of our drains have more free area close to the roof where it matters to prevent ponding. So when your project has a gravel stop perimeter or thru wall scupper for overflow protection the Froet primary is the correct answer for your project .
